

Name: Aliza Asghar

Roll: FA24-BCS-016

ASSIGNMENT-1:

Task: Build a single-page personal CV/résumé as a static HTML + CSS website — no JavaScript, no framework, just semantic HTML5 and hand-written CSS. This is where you prove you actually know the raw building blocks before anything is allowed to hide them from you.

Your page must include, at minimum:

A header with your name, a short professional tagline, and a photo (a placeholder image is fine).

An “About Me” section.

An “Education” section listing your academic history in a semantic list or table.

A “Skills” section.

A “Contact” section with a real `<a href="mailto:...">` link and at least one social/portfolio link.

Correct use of semantic HTML5 elements throughout — `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<footer>` as appropriate, not a page built entirely out of unstyled `<div>`s.

Styling entirely in a separate `styles.css` file (external stylesheet, not `inline style=""` attributes) using the box model correctly — sensible margins, padding, and borders, not everything jammed against everything else.

SCREENSHOT:

CODE:

cv.html

```
<!DOCTYPE html>
<html lang="en">

<section class="projects">
    <h2>Projects</h2>
    <h3>Hikmat Markaz – Clinic Management
        System: <strong>    spring 2026</strong></h3>

```

```

        <ul>
            <li>Built a full-stack clinic system with four role-based
portals covering appointment booking, consultation, prescription generation,
and payment tracking.</li>
            <li>Designed a 19-table PostgreSQL schema normalized to
3NF across 17 migrations, with database-level triggers enforcing slot overlap
prevention and status transition rules, JWT-based authentication, and CNIC-
based global uniqueness constraints.</li>
            <li>Integrated Supabase with Flask APIs to manage
authentication, persistence, and secure role-based access across patients,
doctors, receptionists, and administrators.</li>
        </ul>
        <h3>Vulnerability Assessment Expert
System:      <strong>      Spring 2026</strong></h3>
        <ul>
            <li>Built a rule-based expert system to assess
cybersecurity risk across authentication, encryption, and application
security.</li>
            <li>Implemented a forward-chaining inference engine with
62 rules, certainty factors, and compound escalation logic to produce a
scored, explainable vulnerability report.</li>
        </ul>
        <h3>Zer-e-Aab – Flood Relief & Management
System:      <strong>      fall 2025</strong></h3>
        <ul>
            <li>disaster management desktop app with three integrated
modules: flood prediction, evacuation path planning, and priority-based relief
distribution.</li>
            <li>Scraped live river-level readings from 12 PMD stations
using Python, modelled water flow as a weighted directed graph, and predicted
flood risk across regions for the next 7 days.</li>
            <li>Computed shortest and alternate evacuation routes on
a live OpenStreetMap render of Pakistan using Dijkstra’s algorithm; identified
flood-affected zones using a Graham Scan Convex Hull on user-placed map
markers.</li>
            <li>Implemented all DSA from scratch—including a min-heap,
hash map, singly linked list, circular queue, and stack—applying them directly
to routing, victim prioritization, and camp-level resource allocation.</li>
        </ul>
